1. Methods of the study

The network of „Center for Traditional Obstetrics and Family Medicine” in Moscow in its practical work uses both classic (ULTRASOUND, clinical, biochemical test) and traditional (Vegetal-Resonance diagnostics, osteopathy, kinesitherapy, homeopathy) methods of examination and treatment. In the process of study, 350 patients were consulted and examined with a further prescription of MyRealWay bioregulators.

The bioregulators were selected using such diagnostic methods as vegetal-resonance test “Imedis”, KME analytical cloud system, therapeutic survey, Ultrasound, MRT, clinical and biochemical blood tests.

2. Purpose and plan of the study

The purpose of the study was collecting the data through statistical examination to analyze the effectiveness of the MyRealWay bioregulators application. The collected data are to be processed and evaluated. They are the source material for further additional research to prove and confirm the effectiveness of MyRealWay bioregulators.

The group of patients involved in the study consisted of a random sample of patients who consulted a physician specialized in regenerative medicine using the method of functional diagnostics, laser therapy, acupuncture and Bioresonance therapy.

The patients were selected according to the following principles:

- Outpatients
- Patients taking bioregulators as a monotherapy
- Patients taking a complex of several bioregulators
- Patients taking bioregulators in a combination therapy as catalysts in herbal medicine and homeopathy.
- Patients taking bioregulators in the complex therapy to enhance the effectiveness of acupuncture and laser therapy

3. Theoretical aspects

The theoretical basis of holistic medicine underlies this study. Namely, the principle of rehabilitation, the principle of compensation, the principle of adequate stimulation of the body's self-healing mechanisms. The main aspect of this theory is the individual approach to each patient, active motivation and stimulation of body recovering mechanisms.

At the same time, we take into account the theory of energy and information mechanisms of the biological actions of physical (biophysical) factors. Based on the academician Peter Anokhin's theory, the whole organism is the sum of the functional systems, each of them can restructure its functions independently, adapting to the conditions of the external and internal environment. In our study, an important element in such a harmonious work of an organism is My Real Way bioregulators.

We describe the effect of bioregulators according to the Wilder-Leites rule. The weak stimuli evoke the work of living elements, average stimuli – strengthen it, strong stimuli impede activities, and very strong – paralyze it. In our case, the weak stimuli are peptide chains, average are vitamins and trace elements. Strong and very strong stimuli, such as antibiotics and hormones are not present here.

We also use the theory of extracellular matrix regulation. Extracellular matrix provides mechanical support for cells, and transport for chemicals. The extracellular matrix is more abundant than its surrounding cells and determines the physical properties of the tissue.

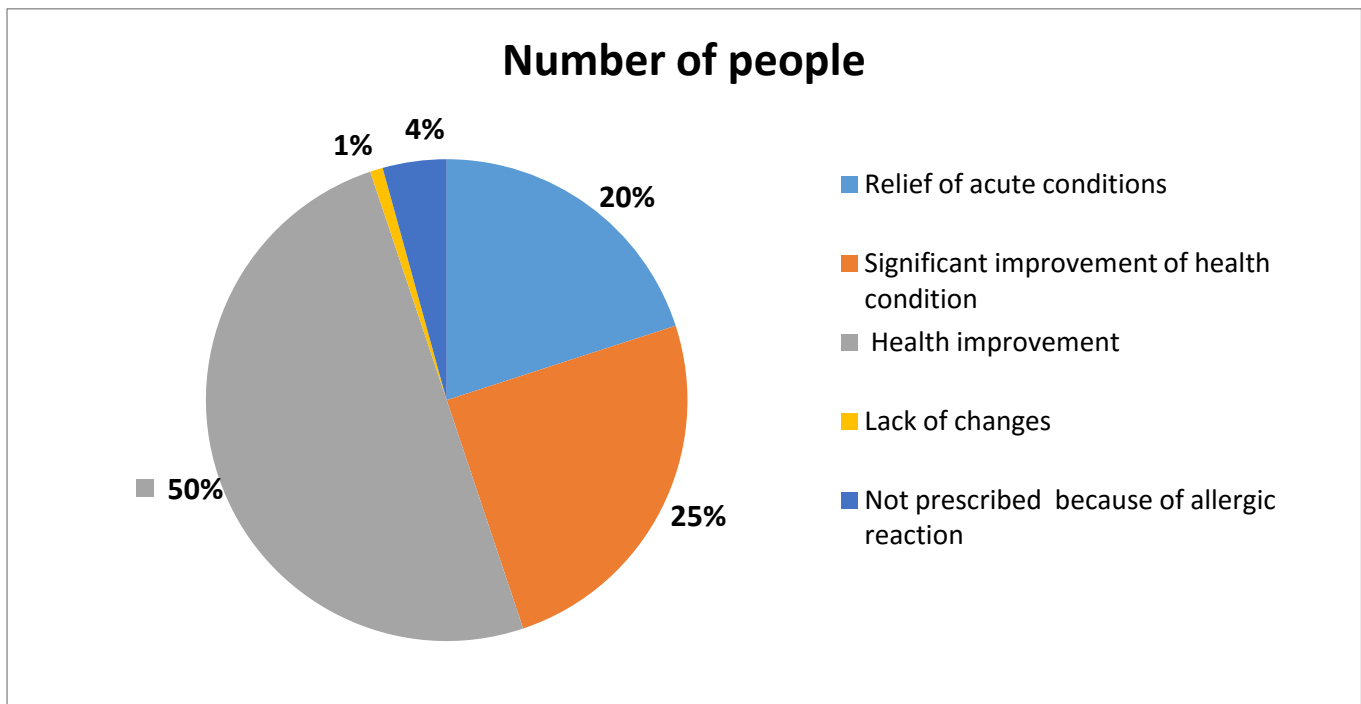

4.Data analysis

In the process of the study 335 patients had a treatment with application of My Real Way bioregulators.

The conclusion of the study:

- The diseases were fully stopped - 70 patients;
- Significant health improvement noted, including the results of clinical and biochemical tests and diagnosis at attending physician - 87 patients;
- The partial improvement of health condition and relief of acute manifestation of diseases - 175 patients;
- Lack of changes in health condition after taking MyRealWay bioregulators - 3 patients

At the beginning of the diagnostics when selecting bioregulators an allergic reaction was revealed in 15 patients caused by autoimmune disorders in anamnesis, hereditary intolerance to the B vitamins and individual allergies to herbals.

The intake of bioregulators has been prescribed by a doctor, according to various schemes described above. We will present the results of intake of a single bioregulator for a particular disease. In the framework of the monotherapy, we can highlight the significant improvement in health condition of 63 patients

**Results of application
of MenoTIDE PLUS and WomenTIDE PLUS
in the treatment of diseases of the female reproductive system**

- Diagnosis: climacteric syndrome of the 1st and 2nd stages
15 patients – women in menopause, aged 50-65
Result: the significant improvement of climacteric disorders (the mood improved, blood pressure has stabilized, hot flashes reduced) after intake of bioregulator **MenoTIDE PLUS**
- Diagnosis: Premenstrual syndrome
10 patients – women, aged 22-38 years
Result: while taking bioregulator **WomenTIDE PLUS** patients felt comfortable before and during periods, the pain syndrome reduced during periods, periods were not so abundant.

**Results of application
of HyperacidTIDE PLUS, LowacidTIDE PLUS, MicrofloraTIDE PLUS, LiverTIDE PLUS
in the treatments of diseases of the digestive system**

- Diagnosis: chronic gastritis, gastric ulcer, exacerbation of diseases
5 patients - men and women, aged 30-55 years
Result: after the intake of bioregulators **HyperacidTIDE PLUS** the acute stage of gastric ulcer exacerbation was relieved
- Diagnosis: chronic calculous cholecystitis, chronic gastritis
2 patients - women, aged 52 and 57 years
Result: the surgery was carried out on patients – laparoscopy of the gallbladder. After surgery the intake of bioregulator **LowacidTIDE PLUS** was prescribed together with dietary therapy. As a result, the recovery period was twice shorter than that in other patients who have not taken bioregulators.
- Diagnosis: symptoms of dysbacteriosis after taking antibiotics
5 patients of different age
Result: patients took bioregulator **MicrofloraTIDE PLUS** to relieve symptoms. The other control group of 5 people took Linex, Normospectrum, Biform. The diagnostics were performed using BRT method. The recovery period was 7 days shorter in patients who took bioregulators.
- Diagnosis: hepatosis with elevated alanine aminotransferase (ALT), aspartate aminotransferase (AST), gamma-glutamyl transpeptidase (GGT), erythrocyte sedimentation rates
1 patient, a woman aged 59 years
Result: At the first stage she took Heptral intramuscularly and orally. At the second stage, the patient took bioregulator **LiverTIDE PLUS**. The bioregulator showed similar high results.

**Results of application
of BoneTIDE PLUS, JointsTIDE PLUS
in the treatment of diseases of the muscular-skeletal system**

- Diagnosis: osteoporosis, 1 and 2 stage.
2 patients, women aged 57 and 62 years
Result: after the treatment course with bioregulator **BoneTIDE PLUS** the positive dynamics were noted according to the results of densitometry made before and after the treatment course. .

- Diagnosis: violations of locomotorium of different localization with painful syndrome in joints, the spine.
17 patients between the ages of 12 and 70 years
Result: while taking bioregulator **JointsTIDE PLUS** the patients noted a reduction of painful symptoms, increasing of motion amplitude in joints.

**Results of application
of BrainTIDE PLUS, NervesTIDE PLUS
in the treatment of diseases of the nervous system**

- Diagnosis: violation of cerebral circulation
2 patients, men aged 46 and 56 years
Result: receiving bioregulator **BrainTIDE PLUS** the patients noted health improvement expressed in reducing headache and improving concentration

- Diagnosis: asteno-neurotic syndrome, vegetovascular neurocirculatory dystonia
2 patients
Result: in the process of taking bioregulator **NervesTIDE PLUS** the blood pressure stabilized, headache and weakness have gone.

- Diagnosis: hyperkinetic syndrome
2 children at the age of 4 and 12 years
Result: as a result of bioregulator **NervesTIDE PLUS** intake, hyperkineses in children decreased

Results of complex application of several bioregulators

MyRealWay at various diseases

Example from medical practice

272 patients took 30 different bioregulators in different combinations and treatment regimens. Bioregulators were selected individually for each patient using methods of Vegetal-Resonance diagnostics, KME analytical cloud system, taking into account the clinical analyses, biochemical analyses, ultrasound examination of internal organs.

Examples of using bioregulators in complex treatment in medical practice:

1) Woman, 50 y.o.

Diagnosis: suffered from SARS, cytomegalovirus infection, with the complication of pneumonia

High fever, shortness of breath, attack-like dry cough. The patient has got 2 courses of intravenous drip treatment with cephalosporin antibiotics. The remaining symptoms – cough, shortness of breath, fluid in the pleural cavity.

Result: It was prescribed to take bioregulators **BrainTIDE PLUS**, **DetoxiTIDE PLUS**, **UrinaTIDE PLUS**, laser therapy, acupuncture№5, breathing exercises. The health condition improved, cough passed, breathing restored.

2) Woman, 57 y.o.

Diagnosis: obesity of the 2nd stage, toxic hepatitis, cholestasis, acid reflux, biochemical blood test showed GGT 90 unit per liter

Result: It was prescribed to take a course of bioregulators **HyperacidTIDE PLUS**, **DetoxiTIDE PLUS**, **LiverTIDE PLUS**, dietary therapy, Phytotherapy. After a month treatment course, the biochemical blood test showed GGT 55 units per liter. The overall health condition improved, acid reflux has gone away. Weight decreased by 4 kg.

3) Girl, 12 y.o.

Diagnosis: scoliotic deformity of the spine. Constant back pain for 2 months.

Result: bioregulator **BoneTIDE PLUS** was prescribed. The pain has passed after a month treatment course.

4) Man, 32 y.o.

Diagnosis: hepatitis C, exacerbation of the gastric ulcers. Symptoms of blunt aching pain in epigastric area, dyspeptic violations.

Result: dietary therapy is prescribed. It was suggested to replace the intake of Omeza with bioregulator **HyperacidTIDE PLUS**, 1 capsule 2 times daily for 10 days and 1 capsule 1 time a day for 10 days. The pain syndrome was stopped.

CONCLUSION

The multicomponent peptide bioregulators in the process of collecting data on the effectiveness of its application have proven its effectiveness in both complex therapy and monotherapy. In the complex treatment more than 80% of patients noted health improvement after using bioregulators, in a monotherapy all patients noted positive effect.

It is important to point out the advantage of bioregulators in relation to popular pharmaceutical medicines, namely, 1.5 times more rapid recovery after surgery and recovery after medical treatment.

During the study, the effectiveness of bioregulators has been confirmed by clinical tests, VRT and KME diagnostics tests made before and after treatment, as well as subjective feedback from patients.
